USBProLite™ 485 Interface For Cash Drawers

Mobile Cash Drawer Solution

The 485 USBProLite™ USB to Serial emulation interface brings certain benefits of USB (connection, power, etc.) coupled with the ease of integration development found in serial connections. Serial emulation of a USB cash drawer eases the development of POS applications, provides software compatibility with RS-232 based legacy POS devices, and gives good abstraction of the USB for application developers. The 485 USBProLite™ USB to serial emulation interface is available for Series 100, Series 4000, and Vasario cash drawers.

PRODUCT FEATURES

- ▶ USB bus powered (no need for an external power supply)
- ▶ Android support via FTDI's Java D2XX driver (<https://www.ftdichip.com/Android.htm>)
- ▶ Serial Emulation support for Windows 10, MAC 10.4+, Linux
- ▶ A 6ft/2m USB-A/USB-B cable is included
